Cloud-Based
Speech Recognition

OPTIMIZES RADIOLOGY WORKFLOW

“SayIt has met – and even exceeded – my expectations as an experienced speech recognition user.

With SayIt, we can scale our business while improving quality and timeliness of reporting.”

Dr. David Cohen, Founder and Chief Medical Officer, Teleradiology Specialist

WHAT YOU REALLY WANT FROM YOUR SPEECH RECOGNITION SOLUTION

High accuracy

A solution that follows you wherever you need to work – one account, one version

Able to support remote users without spending hours on the phone

Avoid downtime and effort installing new releases

No new hardware or network equipment

No upfront dollar investment, especially when you have providers coming and going

Ability to easily build your own templates in addition to standard industry versions

WHAT YOU’RE PROBABLY GETTING TODAY FROM THE OTHER GUYS

Yes, but at what price?

Multiple versions of the same product that don’t talk to each other. A bill for another license when you want to work at home.

Hours spent on the phone because you can’t see what’s happening on the other end. Trips to remote sites to install new users.

Annual maintenance bills and pressure to move to new versions

Cloud servers that you get to pay for

Hefty license fees that aren’t transferable. Or, monthly subscriptions requiring a long-term commitment.
