

iScribe Speech EMR

iScribe Speech EMR for More Proficient Workflow for Physicians

Feasibility

iScribe Speech EMR true cloud based solution is a reasonable, easy-to-use speech recognition solution that transforms speech to text within seconds, on average three to four times the speed of keystrokes. Unlike other offerings requiring desktop software installation or expensive emulation packages, iScribe can be accessed over the Internet from multiple locations and devices, with no software to install or upgrade.

Why choose iScribe Speech EMR

As a SAAS offering, iScribe Speech EMR is simple to deploy and support. It works as a speech overlay technology with 3rd party applications (EHR/EMR), without the need for manual "cut-and-paste." iScribe Speech EMR offers real-time dictation as well as "Workflow Shortcuts," customizable speech commands that retrieve text blocks, pull up reference information, and simplify workflow throughout the entire healthcare organization.
